MODEL 6507 MODE SELECTOR

This unit was developed for vessels where the control station and the mode selector have to be located in different areas. An example would be where there is limited space below the control or where separate controls for each engine. This has proved especially useful for applications such as sports fishing boats where two side mount controls are installed at the aft console with the mode selector mounted on the top of the console.

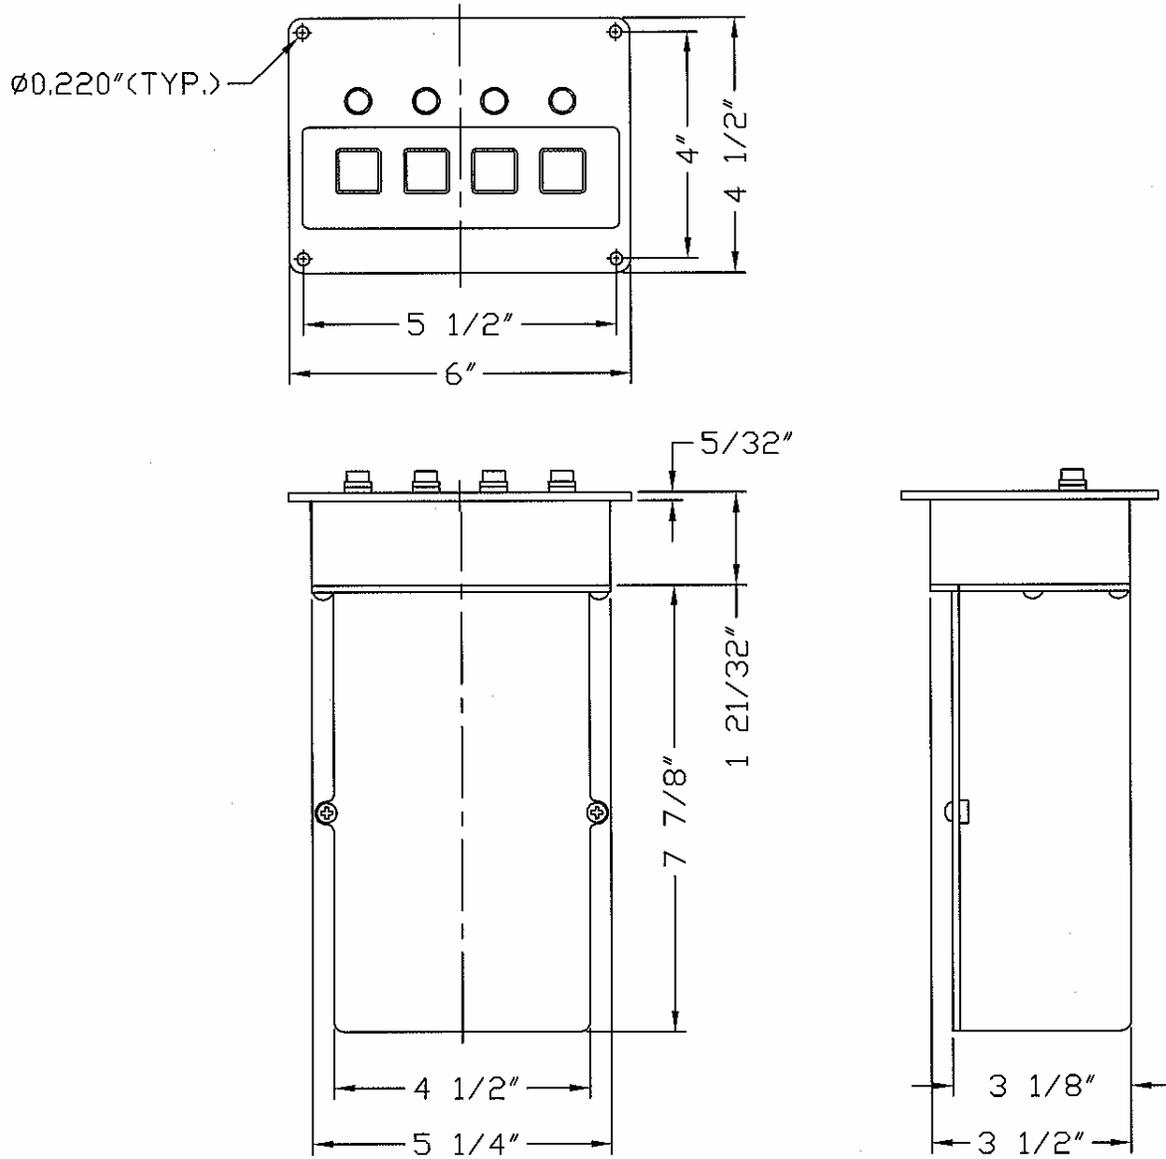

The housing is constructed entirely of bronze with water resistant key pad and lights. However, the underside is not hermetically sealed and should be protected from the elements.

Ordering Information::

Model Designations:	6507-S4	4 switches & lights
	6507-S6	6 switches & lights

The unit is available in	Black epoxy (as shown)
	Polished Bronze
	Chrome plated
